Explanation

I started with customers, movies, theaters and co int
ncessions.

I've been built out tickets knowing that they would pull from movies and the int
aters.

I then worked out how I would get concessions a int
nd tickets in the same ta ble as items sold.

Sales is then an ID that c an have all of the items s old on a given sale assoc int
iated with customer and total price.

I then built out payments knowing that it would be separate from a sale but int
still need to pull from all t he sale and customer inf ormation
